# Bug report #1

1. Description

The example loan described at the bottom of the calculator has a different monthly repayment from the one calculated. The variables used (loan amount, duration and interest) to calculate the payment are the same, but the results differ. This might mislead a potential client.

2. How to reproduce

Open the loan application form with Chrome or Firefox: https://ansokan.bigbank.se/?amount=85000&period=120&interestRate=10.95&lang=sv&bbsource=google&bbchannel=organic and open the calculator modal by clicking its button at the top-right corner. Note that the loan sum is 85 000 Kr, the loan duration is 120 months (10 years) and with the interest rate of 10.95% it calculates a different monthly repayment amount from the one provided by the example at the bottom of the calculator.

3. Actual Result

Using the same variables (amount, duration and interest), the calculated repayment amount is slightly higher than described in the example.

4. Expected Result

        Using the same variables (amount, duration and interest), the calculated repayment amount <u>should be the same</u> as described in the example.

5. Which environment

        Chrome or Firefox browser on Windows 10
